

VIEW TO RECREATION BUILDING / WELLNESS CENTRE

The vehicle bridge crossing provides a suitable 'gateway' type arrival to this feature area, crossing to the Recreation Building on the right side and the Wellness Centre to the left, with extensive trees across this precinct providing green vistas to the east and west, and significant canopy tree setting. The bridge is to provide a feature, with an arched form and stone finish.

VIEW TO RECREATION BUILDING / PREMIUM ILU'S

The Recreation Building has been located in the centre of the site and set into the lowpoint in the landform in order to provide a feature landscape setting that easily accommodates the scale of these buildings. The lake provides a feature foreground for views to and from the building. The terraced water cascades aerate the lake water, and operate only during daylight hours.
